# Chapter 1

## Class Index

### 1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Timer</a> . . . . .	5
---------------------------------	---

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all documented files with brief descriptions:

[Timer.cpp](#)

This class can be instantiated in order to time operations. It consists of three functions: a `start()`, a `stop()`, and a `getElapsed()`. It throws logic errors and notifies user if any foul data manipulation is attempted . . . . .

## Chapter 3

# Class Documentation

### 3.1 Timer Class Reference

#### Public Member Functions

- void [start](#) () throw (runtime\_error)
- void [stop](#) () throw (logic\_error)
- double [getElapsedTime](#) () const throw (logic\_error)

#### 3.1.1 Member Function Documentation

##### 3.1.1.1 double Timer::getElapsedTime ( ) const throw (logic\_error)

getElapsedTime assigns the double value timeE with correct sum of duration's contents and returns it

#### Postcondition

TimeE is set to the adjusted seconds in duration added to the microseconds

#### Exceptions

	<i>If</i> timerEnded is false, throw a logic error and notify the user
--	--

#### Returns

A double value of the elapsed time

##### 3.1.1.2 void Timer::start ( ) throw (runtime\_error)

start assigns, using the function gettimeofday a value to beginTime, then assigns the timerWasStarted to true

**Postcondition**

BeginTime is set using gettimeofday and timerWasStarted is set accurately

**Exceptions**

<i>//</i> the microseconds of begin time do not get set correctly, throw a runtime error and notify the user
--

**Returns**

N/A the functions void

**3.1.1.3 void Timer::stop ( ) throw (logic\_error)**

stop assigns, using the function gettimeofday a value to duration, subtracts the values of duration with the \ values of beginTime then assigns the timerEnded to true

**Postcondition**

Duraron is set using gettimeofday and subtraction and timerEnded is set accurately

**Exceptions**

<i>//</i> timerwasStarted is false, throw a logic error and notify the user
---

**Returns**

N/A the functions void

The documentation for this class was generated from the following files:

- [Timer.h](#)
- [Timer.cpp](#)

## Chapter 4

# File Documentation

### 4.1 Timer.cpp File Reference

This class can be instantiated in order to time operations. It consists of three functions: a start(), a stop(), and a getElapsed(). It throws logic errors and notifies user if any foul data manipulation is attempted.

```
#include "Timer.h"
```

#### 4.1.1 Detailed Description

This class can be instantiated in order to time operations. It consists of three functions: a start(), a stop(), and a getElapsed(). It throws logic errors and notifies user if any foul data manipulation is attempted.
